

RIT F.I.R.E Descender

RIT Rescue and Escape Systems constantly strives to provide our customers with the safest, most reliable and easy to use Emergency Egress and Search Systems on the market. Recent improvements in the NFPA 1983 standards now require a manner of function test for all descending devices and manufactured egress systems. This new test has required RIT to redesign our descending device to pass the more stringent 13.5Kn (3,035 lb.) manner of function test. This test has proven to be very difficult and to our knowledge RIT is the only manufacturer to have all egress systems in their product line certified to the NFPA 1983 -2006 standard. RIT takes pride in this accomplishment. The new F.I.R.E descender continues to be pre-rigged, lightweight and requires only one hand for a controlled descent. The F.I.R.E. descender is available for all of our emergency egress systems regardless of the configuration or type of escape line specified. For more information on the RIT F.I.R.E descender please contact RIT direct at 800-254-2990
